

Centre of Pathology

The aim of the Centre of Pathology is to offer the evaluation of disease diagnosis and treatment quality and therefore improve the basis of medical knowledge.

We use modern test methods by describing the pathological changes in cells and tissue slices that were taken during special procedures and activities.

The Centre of Pathology employs trained personnel who use up-to-date equipment in their daily work and modern diagnostics techniques. We provide competent diagnostic service to, in addition to our own hospital, to other health care institutions.
