

Centre of Occupational Health

The Occupational Healthcare Center provides occupational healthcare services to enterprises of different sizes in the format of both permanent contracts and one-time service. Our Center issues the health certificate for drivers of motor vehicles and we provide seasonal and year-round vaccinations to everyone who wants them. You could visit our polyclinic to get your vaccination.

The advantage of our center is the provision of occupational health services at an active treatment hospital - if the need arises, it is possible to consult with the specialist doctors of our hospital or refer the employee to rehabilitation.

We offer the following services related to occupational health for the company:

- advising employers and employees on occupational health and safety issues
- primary and periodic health check-up of employees, incl. rescue officers, security personnel, prison officers, etc
- organizing the company's occupational safety and occupational health documentation
- vaccination against influenza, tick-borne encephalitis, hepatitis A and B and diphtheria.

The company and the hospital conclude a permanent contract for the provision of occupational health services. The contract is developed based on your company's work environment hazards.

Additional questions can be answered by our customer manager Vilve Ainson via e-mail [vilve.ainson \[at\] itk.ee](mailto:vilve.ainson@itk.ee) or phone [5400 5849](tel:54005849).
