# Independent appointments of urology nurses

A nurse’s independent appointment is an outpatient nursing care service that includes:

- epicystostomy replacement and teaching its care
- counselling a patient with a urostomy
- wound care, dressing, suture removal
- performing nursing procedures (e.g. inserting medicine into the bladder)
- post-treatment monitoring of patients (PSA analysis, general analyses)

If necessary, the nurse will refer the patient to a doctor’s consultation.
