

Vaccination against hepatitis A (1 dose) at the customer's location

You can vaccinate against viral hepatitis A to prevent infection.

Two doses of the vaccine are administered, with an interval of 6–18 months, to ensure immunity against hepatitis A. Hepatitis A is an inflammation of the liver caused by being infected with Hepatovirus A, which damages the liver. Hepatovirus A is transmitted via the faecal-oral route, whether directly from an infected person to a healthy one, or by means of contaminated food and water.
